

coded by chemists for chemists

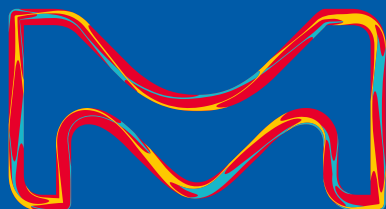

SYNTHIA™ - Retrosynthesis Software

Quickly analyze billions of known and novel pathways against your search criteria. With highly nuanced algorithms and a large expertly coded reaction database of more than 100 000 transformations, Synthia™ goes beyond specific interactions to factor in potential conflict and selectivity issues, as well as stereo- and regiochemistry methods.

SYNTHIA™ retrosynthesis software augments your expertise and can accelerate your research and rate of pathway discovery from weeks to minutes. Now, you can quickly go from imagining what's possible to testing what's probable.
